Models 5790 & 5890

Multifrequency Clock Synthesizer - 6U OpenVPX

Model 5890

Features

- Simultaneous synthesis of up to five or 10 different clocks
- Eight or 16 SMC clock outputs
- Typical phase noise: -105 dBc/Hz @ 1 kHz offset
- All clocks are phase-locked to input reference signal
- Input reference frequency of 5 to 100 MHz
- Four or eight quad VCXOs allow selection from 16 different base frequencies
- Output clocks of 1, 2, 4, 8, or 16 submultiples of VCXO base frequencies
- Output clock frequencies between 50 and 700 MHz
- Control and status over the VPX backplane

Ordering Information

Model	Description
5390	Multifrequency Clock Synthesizer - 6U VPX Single Density
5890	Multifrequency Clock Synthesizer - 6U VPX Double Density

Options

Specify frequencies of factory-installed quad VCXOs between 50 and 700 MHz

* Contact Pentek to order specific frequencies

General Information

Models 5790 and 5890 generate up to eight or 16 synthesized clock signals suitable for driving A/D and D/A converters in high-performance real-time data acquisition and software radio systems. The clocks offer exceptionally low phase noise and jitter to preserve the signal quality of the data converters. These clocks are synthesized from on-board quad VCXOs (voltage controlled oscillators) and can be phase-locked to an external reference signal.

Clock Synthesizer Circuits

These models use four or eight Texas Instruments CDC7005 clock synthesizer and jitter cleaner devices. Each CDC7005 is paired with a dedicated VCXO to provide the base frequency for the clock synthesizer. Each of the four VCXOs can be independently programmed to generate one of four frequencies between 50 and 700 MHz.

The CDC7005 can output the selected frequency of its associated VCXO, or generate submultiples using divisors of 2, 4, 8 or 16. The CDC7005's can output up to five frequencies each. These models can be programmed to route any of these frequencies to the board's five or 10 output drivers.

The CDC7005 includes phase-locking circuitry that locks the frequency of its associated VCXO to an input reference clock. This reference is a 5 to 100 MHz signal supplied to a front panel SMC connector.

Eight or 16 front panel SMC connectors supply synthesized clock outputs driven from the five clock output drivers, as shown in the block diagram. This supports a single identical clock to all outputs or up to five or 10 different clocks to various outputs.

With four or eight independent quad VCXOs and each CDC7005 capable of providing up to five different submultiple clocks, a wide range of clock configurations is possible. In systems where more than 10 different clock outputs are required simultaneously, multiple 5890's can be used and phase-locked with a 5 to 100 MHz system reference.

Specifications

Front Panel Reference Input

Connector Type: SMC

Input Impedance: 50 ohms

Reference Frequency: 5 to 100 MHz

Input Level: -6 dBm to +10 dBm

PLL Clock Synthesizers & Jitter Cleaners

Quantity: Model 5790: Four

Model 5890: eight

Type: Texas Instruments CDC7005

Frequency Dividers: 1, 2, 4, 8 and 16

Quad VCXOs (Quantity: Four or Eight)

Frequencies per VCXO: 4*, software-programmable

Frequency Range: 50 to 700 MHz

Unlocked Accuracy: ±20 ppm

Front Panel Clock Outputs (Eight or 16)

Connector Type: SMC

Output Impedance: 50 ohms

Output Level: +3 dBm @ 700 MHz

Typ. Phase Noise: -105 dBc/Hz @ 1 kHz (dependent on reference source stability)

PCI-Express Interface

PCI Express Bus: Gen. 1, 2: x4, control and status

Environmental

Operating Temp: 0° to 50° C

Storage Temp: -20° to 90° C

Relative Humidity: 0 to 95%, non-cond.

Size: 233 mm x 160 mm (9.173 in. x 6.299 in.)
